SUMMARY

Self-taught full-stack engineer and founder who can build anything, lead the team building it, and design it with real taste. Founded Gravity Proxies at 13 and grew it to $500K+ in lifetime sales. As Anvara's first engineering hire and CTO, took its sponsorship marketplace from zero to launch; it's now used by brands like CarGurus, BeReal, and Kalshi, and partners like NASCAR. Has shipped 25+ products in total, from consumer iOS apps to marketplaces and full business platforms (TypeScript, React Native, Next.js/Node).

EXPERIENCE

Sculpt AI Co-Founder & CEO — July 2024 to Present · New York

- Founded the company and own product and engineering end to end, including hiring and managing a product designer. Live on the App Store since March 2026: 1,000+ users and a 4.8-star rating.
- Built Sculpt's training engine around progressive overload and RPE: it estimates each lift's strength from logged sets, recalibrates weights every session, and ramps weekly volume through training blocks with deloads.
- Shipped an Expo/TypeScript iOS app and a Node GraphQL backend on AWS EC2 with Prisma/Postgres, with food search and logging built on the FatSecret Platform API.

Anvara Chief Technology Officer — March 2024 to May 2025 · New York

- First engineering hire and CTO. Took Anvara, a two-sided marketplace for sports and live-event sponsorships, from zero to launch, leading a team of two engineers. Case study.
- Designed and built both sides: sellers (stadiums, teams, stores, billboard companies) list sponsorship inventory, and brands browse an Airbnb-style marketplace by tier, with audience, impression, and event data.
- Built the full deal flow: proposals and back-and-forth on pricing and terms, contract signing (DocuSeal), creative asset handoff, and live campaign analytics after launch.
- Brands using the platform include CarGurus, BeReal, Kalshi, and Polymarket, with partners like NASCAR, Hyrox, and Daybreaker.

Arkeo Founder · Development studio — New York

- Independent development studio for client work: design, frontend, backend, and infrastructure, owned end to end from first call to launch.

> **Cultivar** Lead Developer (Contract) — December 2025 to Present
>
> - Contracted to build Cultivar, an all-in-one platform for cannabis businesses: inventory, orders, customers, outreach, and their online store in one system. Think Shopify, built for cannabis. Now in closed beta.
> - Architected and built the platform end to end, from purchasing and inventory to the storefront, driver app, and live delivery tracking (TypeScript, GraphQL, Postgres).

- Bluff (September 2025 to January 2026): a Web3 crypto casino and prediction market on one wallet-connected balance. Led two contractors; built the animated front end from client designs, plus the backend for a referral rewards system that tracks referred users' spend, and a custom CMS (Next.js, Supabase, TypeScript). Case study.
- Also: Celestix, Aura.

Gravity Proxies Founder — December 2018 to March 2024 · Remote

- Founded at 13 (as Proximity Proxies, scaling through four brands), selling datacenter, ISP, and residential proxies to the sneaker botting market.
- Built the storefront, payments, and customer dashboard, and directed contractors on the proxy infrastructure. $500k+ lifetime sales.

SELECTED WORK

Sneaker Seeker Founder · iOS — 2021

"The Expedia for sneakers": live pricing scraped from StockX, GOAT, Flight Club, Stadium Goods, and retail, plus news and upcoming releases. 15,000+ users and a 20,000+ follower social page. React Native and Python.

EDUCATION

Northeastern University Entrepreneurship · Left after freshman year to join Anvara as CTO
Avenues The World School Diploma

SKILLS

Design	Figma, Adobe XD, design systems, UI/UX, prototyping
Frontend & Mobile	React, Next.js, React Native, Expo, TypeScript, JavaScript, Tailwind, Socket.IO, HTML, CSS, Swift
Backend	Node.js, Express, GraphQL Yoga, Apollo Server, Prisma ORM, Python, Supabase
Databases	PostgreSQL, MongoDB, Redis
DevOps & Tools	AWS, EAS, DigitalOcean, Vercel, Netlify, Docker, Auth0, Clerk, RevenueCat, Electron, Sanity, Vite, Claude/Bedrock, LangGraph, PostHog, Sentry
